

YOUTH AND WOMEN EMANCIPATION (Yawe)

Inclusive Climate Entrepreneurship 2025-2026

Final Report

Submission date: 11 June 2026

Contact person: Vicent Laurent

Contact email: v.mgema@yawe.or.tz

Programme coverage: 12 Months

Programme name: Inclusive Climate Entrepreneurship 2025-2026.

Country of registration: Tanzania

Country/region/area of programme implementation: Shinyanga, Tanzania.

List of all programme implementation partners: Tanzania Forest Services (TFS) & Shinyanga Local Government Authority.

Progress updates& results to date

I. What were the key achievements of the programme over the course of implementation? Please outline how the programme contributed to its intended outcomes or impact and highlight any meaningful changes you observed. You may include up to 3 photos here.

From June 2025- May 2026, Yawe continued to implement the inclusive climate entrepreneurship program, focusing on empowering marginalized communities around Mwantini Forest Reserve, particularly rural women, persons with disabilities, and youth entrepreneurs by promoting an inclusive, climate-smart beekeeping ecosystem that enhances livelihoods, promotes equitable participation, and strengthens resilience to climate change in Shinyanga, Tanzania. The project sought to achieve three expected outcomes;

Result 1: Strengthened adaptive capacities of marginalized groups through inclusive promotion of climate-smart beekeeping practices.

Under this intended result, Yawe organized 8 training sessions to 4 groups with 63 members on financial literacy, business resilience practices, and the general beekeeping value-chain. The participants demonstrated an increased level of knowledge on smart-beekeeping practices, and our pre- and post-test assessments indicated **a substantial increase in knowledge level, from an average of 26% at baseline to 84% at end line.** However, feedback from the participants showed that the program has helped them to start or grow their beekeeping activity, adopting the modern ways of practice. Figure 1 summarizes the result.

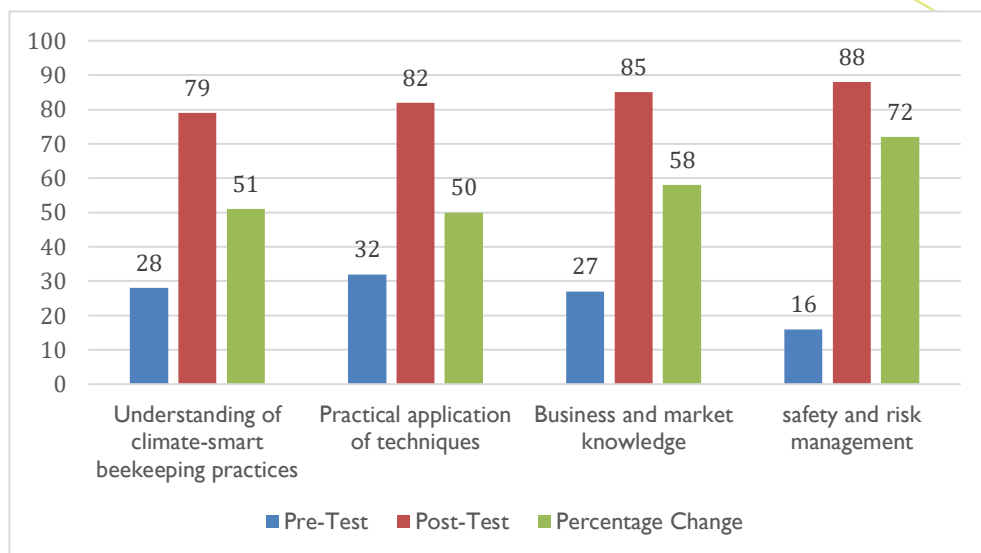

Figure 1: Pre and Post-Test Results among participants on smart-beekeeping practices

One of the leaders of the Vijana Beekeepers Group remarked that;

“...the practical training has helped us to learn and share experience by jointly working together to address the challenges in the bee colonies,” Juma Kayenga, Male, Aged 20. A group Chairperson from Bushoma village.

Photo 1: shows a group of women from Mwawaza village putting beeswax on the beehives ready for installation

Result 2. Enhanced access to resources and green economic opportunities for marginalized groups, enabling their equitable participation in climate-smart beekeeping enterprises.

Under this expected result, Yawe provided a start-up support or grants, including essential equipment, materials, and financial resources, to trained entrepreneurs, enabling them to launch or expand climate-smart beekeeping businesses. Four groups with a total of 63 members (40 females, 23 males) have already received 100 beehives and installed in Mwantini Forest Reserve. Introduction of beekeeping has attracted other community members to seek technical assistance from the groups so that they can adapt the practices as an alternative way to climate change adaptation in Mwantini Village.

Photo 2: shows the exercise of beehive installation for a young women's group in Mwantini Forest Reserve

Increased representation and participation of marginalized groups in the smart-beekeeping value chain and protection of the Mwantini forest reserve. The project has significantly increased the involvement of the marginalized groups, especially rural women, people with disabilities, and youth in the smart beekeeping value chain. For instance, in this year, Yawe has engaged 63 beneficiaries, with over 64% being females, and 36% being males. However, 24% of all beneficiaries were people with disabilities. This reflects our commitment and deliberate actions taken by the organization towards inclusivity in the program.

The trained groups are currently reported to participate in the forest patrols, ensuring that illegal activities are eliminated. The report from the Tanzania Forest Service evidences that there has been an increase in

participatory forest conservation through the beekeepers, and this has been helpful in addressing illegal logging and charcoal making in the forest reserve.

Photo 3: group members (young women) and people with disabilities from Bugimbagu and Shinyanga Municipal participating in the smart-beekeeping training

Result 3. Enhanced DEI integration in YAWE governing systems and at-risk community groups to promote inclusive leadership and operational practices

The activities implemented under this result included supporting and facilitating DEI-driven youth group empowerment and integration into organizational governance systems; conducting capacity building and a comprehensive review of the MEAL (Monitoring, Evaluation, Accountability, and Learning) system to ensure equitable participation and benefits in climate entrepreneurship ecosystems and facilitating peer exchange and policy advocacy learning events to promote inclusive climate enterprises.

- Three staff members of YAWE participated in the capacity development sessions focusing on DEI- program integration and this helped us to cascade the training to the group leaders of the project beneficiaries. Among the four engaged groups, 2 groups are led by women, and 1 group is managed by person with disabilities and 1 youth group is led by a male. Increasing leadership of marginalized communities in these groups has resulted into increased confidence in participating in the program, attracting more marginalized groups seeking to engage in the program.
- Within YAWE, we managed to review 5 key governing policies: the communication policy, human resource policy, GESI policy, M&E plan and the strategic plan to integrate DEI principles. Currently, the documents

are under the review of the board of directors. However, the organizational has made deliberate action to recruit 1 female assistant accountant female ensuring that our commitments to inclusion and gender equality is upheld within our governing system. Additionally, one person with disabilities has been appointed as a youth representative in the board of directors of YAVE with commitment of budget allocation by 2% for accommodating the needs of people with disabilities across the organization's operations.

Changes in scope of work

2. Were there any unexpected changes (positive or negative) during implementation that affected the overall objectives of the programme as outlined in Exhibit B of the Sub grant Agreement?

No, there was no unexpected changes occurred in the course of project implementation

3. Was the timeline of the programme adjusted? If yes, please explain the changes.

There were no changes made to the timetable of the program. All activities that were planned were carried out within the time allotted as planned.

4. Have there been any changes to the planned activities? If so, what were these changes and what were the reasons for these variances?

There were no alterations made to the activities that were planned. All activities had been implemented in accordance with the implementation plan.

Programme Impact

Please reflect on **quantitative** metrics if you have collected extra data and insight to address the below questions.

1. Please provide the interim numbers for the quantitative metrics regarding the achievement of individual work plan targets or KPIs. Please reflect on your original commitments to the project. Please refer to your revised MEL Framework and TOC
Please present on a table format. Report on the interim project achievements.

Committed	Actual as of 9 Jan 2026	Reason for the discrepancy
45 target beneficiaries trained in green skills or sustainable livelihoods disaggregated by sex, age group, and disability status	• Number: 63 beneficiaries trained on green skills or sustainable livelihoods. • Gender: 40 females, 23 males including 15 persons with disabilities. • Age: 72% of all beneficiaries were aged 15-35 years and only 28% were aged above 35 years	We reached more beneficiaries than the planned target because by the time we received the grant, the exchange rate appreciated, resulting to have more gains.
75 hives established using forest-friendly practices, supporting forest regeneration.	• 100 hives established and 100 hives have already been deployed in Mwantini Forest reserve to four groups of beneficiaries	We reached more beneficiaries than the planned target because by the time we received the grant, the exchange rate appreciated resulting to have more gains.
45 entrepreneurs access seed capital or resources to support their initiatives.	• 63 beneficiaries already received 100 bee hives as seed capital or resources to support their initiatives.	We reached all four groups and successfully provided them with 100 beehives and two bee suits for each group.
5 key governing documents (Strategic plan, M&E plan, human resource policy, GESI policy, and communication strategy) of YAWE reviewed to incorporate DEI principles.	• 5 YAWE's governing policies, communication policy, human resource policy and strategic plan, M&E plan, GESI policy reviewed to integrate DEI principles. • 5 board members of YAWE oriented on integration of DEI-principles into organizational governing system. • 1 female assistant accountant recruited to support the program operations. • 1 person with disabilities appointed as a youth representative our governing board of YAWE. • Annually, YAWE has started allocating 2% of its annual budget for accommodating	We successfully met all the 5 key governing documents policies.

	the needs of people with disabilities in all programs	
5 youth and women cooperatives and forest management committees mainstreamed inclusive green entrepreneurship in the governing structure.	5 beneficiary groups with total of 12 leaders trained on DEI integration and leaderships. 58% of the leaders of the groups are women, with 25% are leaders of the group of people with disabilities.	We have successfully reach all 5 beneficiary groups on DEI integration and leaderships.
Indicators at the outcome level		
% of marginalized individuals (youth, women, persons with disabilities) trained in climate-smart beekeeping practices	63% of the trained individuals were females. 37% of the trained individuals were males 24% of all individuals trained were people with disabilities. 72% of all beneficiaries were youth aged 15-35 years.	We have reached all four groups on climate-smart beekeeping practices total of 63 individuals.
Narratives of empowerment and leadership from youth, women, and persons with disabilities.	1. https://youtu.be/VW8T6m8TyRaQ -Chausiku Kulwa, a group secretary from Bugimbagu, is determined to share the knowledge with others. 2. https://youtu.be/M0ycXNEQZdc -Ms Ezeleda, a group chairperson from Bugimbagu beekeepers	We have successfully reached all narratives of empowerment and leadership from youth, women and persons with disabilities.
Number and % of women, youth, and persons with disabilities receiving start-up kits, protective gear, or beekeeping equipment.	63 beneficiaries received beehives 100% of the beneficiaries who received the beehives were females.	We have successfully provided them with 100 beehives and protective gear for 63 beneficiaries.
Testimonies or case stories showing how access to resources improved confidence and inclusion among marginalized participants	6 case story generated and attached under this report	We have successfully collect testimonies, stories showing how access to resources improved confidence inclusion among marginalized participants.

% of leadership or decision-making positions within YAWE held by women, youth, and persons with disabilities.	• 40% of YAWE leadership is held by young women. • 90% of YAWE leadership is held by young people aged 15-35% • 70% of the YAWE board of directors is held by young people aged 15-35 years	We have successfully reach 40% of YAWE leadership held by young women,90% of YAWE leadership is held by young people aged 15-35% and 70% of the YAWE board of directors is held by young people aged 15-35 years.
% of leadership or decision-making positions within marginalized groups held by women, youth, and persons with disabilities.	• 58% of the group leaders are women. • 25% of the group leaders are people with disabilities. • 58% of all group leaders are youth aged 15-35 years.	We reached 58% leaders lead by Women,25% of the group leaders are people with disabilities and 58% of all group leaders are youth aged 15-35 years.
Stories or testimonies showing increased confidence, visibility, and influence of women, youth, and PwDs in leadership roles.	6	We have successfully collect stories showing increased confidence, visibility, and influence of women, youth and PwDs in leaderships roles.

6. Please describe how the programme enhanced the capacity of the targeted entrepreneurs to succeed with their climate innovations?

The programme's impact on enhancing the capacity of targeted entrepreneurs and this was measured using a mixed-methods approach, which included both quantitative and qualitative tools to ensure a comprehensive understanding of outcomes.

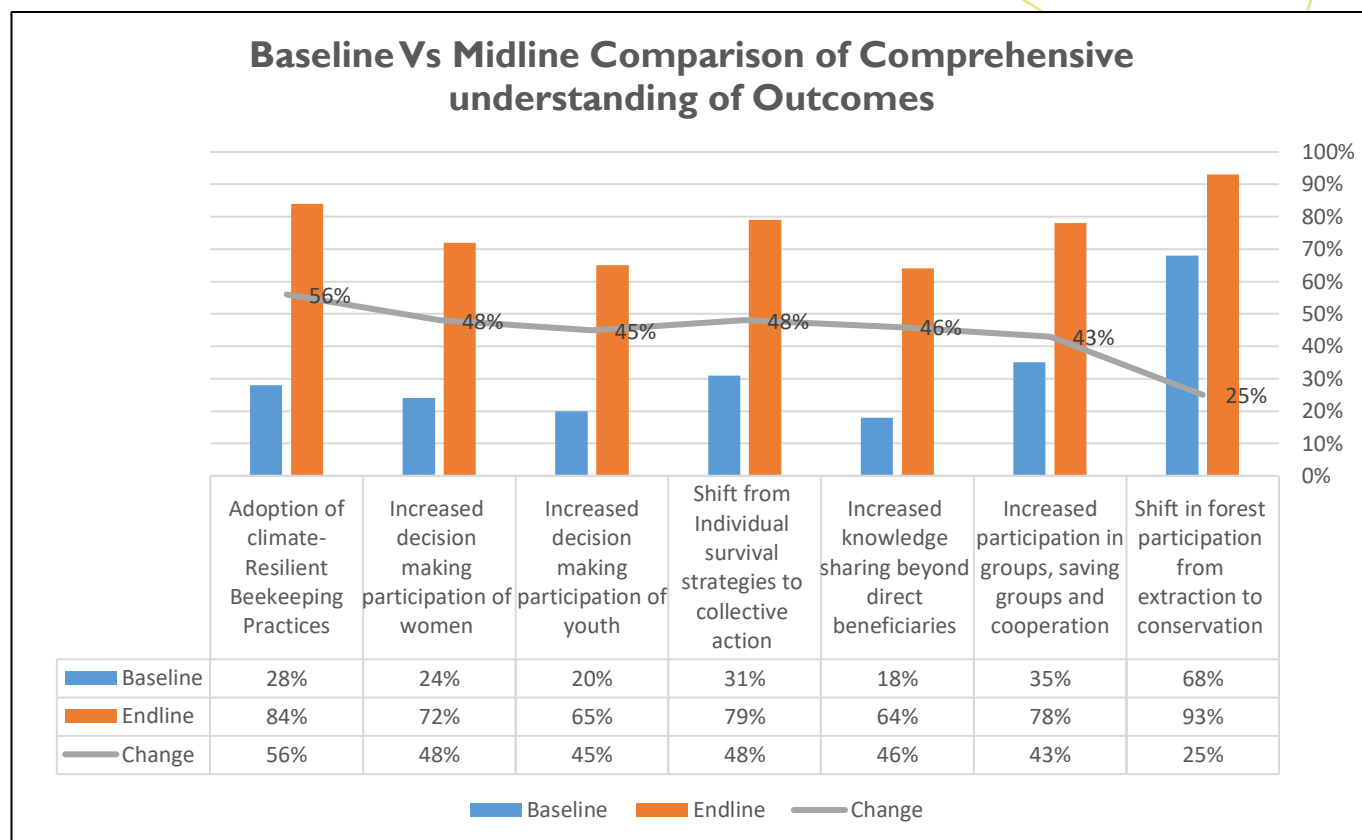

Figure 2: shows the midline evaluation on the behaviour changes among the target beneficiaries

I. Adoption of Climate-Resilient Beekeeping Practices.

The project has demonstrated improvement in terms of beekeeping practices by shifting from using traditional beekeeping methods to the adoption of modern ways among the beneficiaries. For example, the beneficiaries reported have increase in the use of improved hives, reduced losses from droughts/pests, and improved quality and honey yields.

Data from our baseline indicates that only 28% of beneficiaries used climate-resilient practices before the project and after the endline assessment, there were remarkable changes in application of knowledge, with 84% of beneficiaries adopting improved hives, proper apiary placement, and climate-adaptive harvesting.

2. Increased Decision-Making Participation of Women and Youth

The integration of DEI principles into the program, particularly within beneficiary groups, enhanced the participation of women and youth in the program, as most participants were more willing to join the group when they discovered that their peers were leading them. Women elected to leadership roles have also demonstrated active participation in decision-making and conflict resolution within their groups. Baseline and endline data indicate substantial improvements in participation levels as summarized in figure 2. Women's participation in decision-making increased from 24% at baseline to 72% at endline, while youth participation increased from 20% to 65%, demonstrating the effectiveness of targeted inclusion strategies.

Qualitative feedback further supports these findings. During focus group discussions and key informant interviews, participants reported that having women and youth in leadership positions increased their confidence to contribute ideas and voice concerns during meetings. Women participants noted that they felt more respected and listened to than before the intervention, while youth reported greater opportunities to influence group decisions and activities. Selected participant feedback included:

"When women started leading the group, more women felt comfortable speaking during meetings and sharing their opinions." Regina Shilinde, Female, Aged 34, from Mwawaza Village.

"Seeing young people in leadership positions motivated us to participate because we knew our concerns would be understood." Ester Maganga, Female, Aged 21, from Bugimbagu Village.

This finding suggests that increased representation of women and youth in leadership structures has promoted meaningful participation and influence in decision-making processes, contributing to more inclusive and responsive group governance.

3. Shift from Individual Survival Strategies to Collective Action

The programme has also strengthened collaborations, shifting from informal and individual coping mechanisms to collective, rule-based approaches, operations, and creating a long-term sustainability of the program and forest conservation. For example, most of the beneficiary groups have formalized their groups, transparent financial management, record keeping, and collective marketing, and have introduced bylaws that govern their operations. This collective action enhanced bargaining power, reduced

operational risks, and improved access to markets, inputs, and extension services, critical enablers for climate innovation success.

The data from the baseline shows that at least 31% beneficiaries were engaged in rule-based collective action. However, our interventions have improved the situation with the endline statistics accounting for 90% all project beneficiaries are in cooperatives with shared bylaws, and joint marketing. This shows a positive change from informal or individual action to structured, rule-based collective action, indicating stronger organization among beneficiaries, improved cooperation and accountability as well as increased bargaining power and market access. This reflects the project's success in strengthening collective governance and economic collaboration among beneficiaries.

4. Increased Knowledge Sharing Beyond Direct Beneficiaries

The project has improved peer-learning and leadership capacity among the beneficiary groups. The trained beneficiary groups actively shared skills, climate adaptation knowledge, and best practices with non-beneficiaries and neighboring communities. This knowledge transmission strengthened learning, increased innovation application beyond direct beneficiaries, and positioned trained entrepreneurs as local resource persons and champions of climate-resilient livelihoods.

Evidence from the baseline and endline assessments shows that only 18% of project beneficiaries were sharing beekeeping skills with others at baseline. This was significantly improved by the endline assessment, with 64% of beneficiaries currently mentoring non-beneficiaries and neighbouring communities. This demonstrates a clear shift in beneficiary behaviour from individual knowledge retention to active peer-to-peer learning. See more feedback from our beneficiary on this link: [Instagram](#)

5. Increased Participation in Groups, Savings Groups, and Cooperatives.

The project beneficiaries have demonstrated an increase in access to resources that support the establishment of their beekeeping initiatives. The profits generated are now reinvested into hives to increase the number of hives and honey yields, creating a long-term sustainability of the program. This is evidenced by data collected during the baseline and endline assessments, showing that only 35% of beneficiaries were participating in groups and savings schemes at baseline while after the endline

assessment, there was a significant increase to approximately 78% of beneficiaries who are regularly participating in groups and savings schemes.

6. Shift in Forest Perception From Extraction to Conservation

The program has positively shifted the perception among the group beneficiaries from viewing the forest reserve as having nothing to benefit from it to a potential asset for changing their livelihoods. This is evidenced by their active participation in reporting any illegal practices within the forest reserve and their participation in forest patrols, which are regularly conducted in a participatory way with the Tanzania Forest Service. Data from the baseline assessment shows that the majority of the project beneficiaries, 68% viewed forests mainly as extractive resources while comparing with the endline assessment, there was notable changes in perception with 93% view forests as livelihood assets requiring protection

The beneficiaries that were supported through the inclusive climate entrepreneurship project have collectively demonstrated positive impacts in the area of social, economic and environmental through the use of climate-resilient beekeeping and other livelihood strategies.

1. Generation of Extra Income

The beneficiaries have increased their honey production and also changed to bee products (wax, propolis), which are providing them with higher incomes in their households. Example: In Shatimba, a group of 15 young people jointly sold 80 kg of honey and earned about TZS 800,000/= equivalent to 300 Euros which they used for purchasing new hives and value-added equipment.

Over 52% of the beneficiaries from Shatimba reported having extra income generated from the beekeeping activity, supporting them in meeting their daily needs at their households.

Photo 4: groups of beekeepers from Kilimawe and Shatiba villages supported by the project selling their honeys during the nationally torch rally in Shinyanga

During focus group discussions and beneficiary interviews, participants reported that beekeeping had become a reliable source of supplementary income, reducing financial pressure on their households and increasing their economic resilience. Selected beneficiary feedback included:

"The income from honey sales has helped me pay school expenses for my children without relying entirely on seasonal farming." Benjamin Juma, Male, Aged 30, from Shatimba Village.

"Before joining the project, I had very limited sources of income. Now I can contribute to household expenses and save some money for future investments." Suzana Shija, Female, Aged 39, from Kilimawe Village.

"The profits from honey and beeswax sales enabled our group to buy additional hives, which will help us increase production in the coming season." Kashinje Mhoja, Male, Aged 28, from Shatimba Village.

2. Empowerment and Inclusive Leadership

Women and youth are at the forefront of activities in leadership, decision-making, and management of the beekeeping cooperatives. For example, in Mwawaza and Shatimba villages, beekeeping groups and cooperatives have gained the trust of local buyers through collective marketing of honey in bulk quantities.

This approach enabled members to negotiate better prices, resulting in approximately 20% higher income compared to individual sales.

During focus group discussions and interviews, beneficiaries reported that the involvement of women and youth in leadership positions increased member confidence, strengthened group cohesion, and improved participation in decision-making processes. Selected participant feedback included:

"Women leaders have helped ensure that everyone's views are heard before decisions are made."

Magreth Joseph, Female, Aged 36, from Mwawaza Village.

"Young people have introduced new ideas on marketing and record-keeping, which have improved the performance of our group." Amos James, Male, Aged 17, from Bushoma Village.

The program has increased the representation of women and youth in leadership structures and enhanced their influence in decision-making and cooperative management, contributing to stronger governance and improved economic outcomes for group members.

3. Collaboration and Governance Improved

The project beneficiaries have moved from relying on individual survival strategies to adopting a structured group under rules and operations that ensure accountability and collaboration. Example: Beekeepers have formed a cooperation that manages within the limits set by the by-laws for apiary management and forest protection, thus preventing theft and destructive activities.

4. Knowledge Sharing and Community Learning

Beneficiaries are the ones who mentor others, thus passing on the climate-smart beekeeping practices to the non-beneficiaries but also to the neighboring communities. Example: The lead beekeepers in Mwawaza helped 10 neighboring community members with mentoring in hive management and honey quality control, which resulted in the adoption.

Qualitative feedback indicates that community-based learning has been an effective mechanism for spreading knowledge and building local ownership. During interviews and focus group discussions, beneficiaries reported that learning from fellow community members was practical, accessible, and easier

to apply because mentors understood the local context and challenges. Selected participant feedback included:

"It is easier to learn from someone in the community who has already applied the techniques successfully." Jesca Deogratus, Female, Aged 25, PwDs, from Nyuki & Mazingira group.

"The lead beekeepers regularly visit us and provide advice whenever we face challenges with our hives." Masanja William, Male, Aged 36, PwDs, from Nyuki & Mazingira group.

The program has strengthened community learning systems and encouraged the dissemination of climate-smart beekeeping practices through local mentorship networks. This peer-learning approach contributes to the sustainability of project outcomes by ensuring that knowledge continues to spread within and beyond the target communities.

5. Improved Access to Climate –smart Resources

As a result of strengthened institution linkages and financial inclusion effort, Wizabhunzuki Group secured a government soft loan of 5million approximately EUR 2,000 for business expansion .This financial support enhanced the group ability to invest in climate-smart enterprises, diversify income sources and improve economic resilience.

Qualitative feedback indicates that improved access to financial resources has increased beneficiaries' confidence and capacity to invest in sustainable livelihood opportunities. Beneficiaries reported that the program's support in linking groups with financial institutions and government financing opportunities helped them overcome barriers that previously limited access to capital. Selected participant feedback included:

"Before the project, we did not know how to access government loans or financial services. Now we understand the process and can apply with confidence." Kalonga Makanga, Male, Aged 37, A chairperson from Shatimba.

"The loan has enabled our group to expand our business activities and invest in equipment that increases productivity." Constacia Msema, Female, Aged 24, from Shatimba Village.

6. Group members recognized as community role models.

Members of the group gained increased recognition and respect within their communities as role models for adopting improved livelihood practices and knowledge with others. Peer-to-peer learning expanded significantly throughout the project period, with the proportion of community members seeking advice, skills, and technical knowledge from fellow community members increasing from 18% at baseline to 64% at endline.

Qualitative feedback highlights the social recognition and trust built through this process. Community members reported that trained beneficiaries were seen as reliable sources of practical knowledge due to their demonstrated success and hands-on experience.

Selected participant feedback included:

"People in the village now come to us first when they want to learn about beekeeping because they trust our experience." Marco Mhoja, Male, Aged 18, from Bushoma.

"The group members have become examples in the community; others follow their practices because they see the results." Franaeli Sumari, Male, Aged 42, from Tanzania Forest Services (TFS) Shinyanga.

The program has strengthened community-based learning systems and enhanced the social recognition of beneficiaries as local experts. This has contributed to the sustained diffusion of improved practices and reinforced the long-term sustainability of project outcomes through peer-driven knowledge transfer.

8.(If applicable) Can you provide qualitative insights from knowledge-sharing activities, including participant feedback on the value of networks, examples of best practices exchanged, and peer collaboration outcomes? Please include direct quotes from beneficiaries.

Qualitative insight from knowledge-sharing activities

7. Value of Networks

Participants shared the view that the membership of learning networks and cooperatives/groups was a potential advantage for the access to knowledge, resources, and markets. Some of the feedback given by participants said:

“Joining the group has changed our situation completely as I learned to protect our hives in the dry season. We are getting more honey now.” – Veronica Charles, Female, Aged 24, from Shatimba Village.

“We are able to give our bee products better prices, and we also pass on all the news about the latest methods of bee-keeping to each other.” Chausiku Kulwa, Female, Aged 23, from Bugimbagu Village.

8. Best Practices Exchanged

Every session was a chance for the beneficiaries to share their latest innovations and techniques with each other, including hive building with the local materials, so that cost can be reduced, attracting the bees in the hives at the right time, so the honey yield can increase. Further, the beneficiaries are sharing information about the value addition techniques (wax processing, packaging) that are simple but very effective in getting the products well priced, creating demand.

“The practical training has helped us to meet others and learn from them. Sharing experiences as a group gave me a deeper understanding of beekeeping. I believe learning together is much better,” says Juma Kayenga, Male, Aged 20, from Bushoma village.

9. Peer Collaboration Outcomes

Peer collaboration led to stronger mentoring, problem-solving, and joint enterprise management. The beekeeping groups are working together to monitor and protect the forest areas where bees feed, thus lessening the negative impacts bees' defections have on honey production. Participants' views:

“Peer learning has been a great source of our self-esteem to manage and oversee even more hives in our village.” Joyce Mwandu, Female, Aged 22, from Bugimbagu village.

“The practical training has helped us to meet others and learn from them. Sharing experiences as a group gave me a deeper understanding of beekeeping. I believe learning together is much better,” says Juma Kayenga, Male Aged 20, from Bushoma village.

“Collaboration and idea sharing not only benefit women and youths but also empower and include them, which is why we plan, sell, and protect our forest together.” Eunice Zabron, Female, Aged 37, PwDs, from Nyuki & Mazingira group.

- [Instagram](#) Mr. Franael Sumari, a training facilitator and bee expert from Tanzania Forest Service in Shinyanga, giving feedback after installation of beehives in Mwantini Forest Reserve

9. Provide a particularly interesting case or impact story from the programme. Think about an individual, start-up or community that was positively affected by the programme. You may include up to 5 photos here.

Please find the attached impact stories together with this report

10. What are some identified gaps/challenges in supporting women entrepreneurs and at-risk groups, and how were you able to overcome these gaps?

1. Time Constraints and Competing Responsibilities

Women entrepreneurs were frequently delaying in attending the training sessions, and when asked, they reported that they were trying to balance household responsibilities with the project workshop sessions, limiting their effective participation in training sessions.

To address this challenge, we adjusted the training schedules to start at 10:00 a.m. and end at 3:30 p.m. This adjustment allowed women to complete their domestic duties before attending, thereby improving punctuality, participation, and concentration during the sessions.

2. Language Barriers

This was experienced during the training sessions, especially by the female participants from rural areas, because of social and cultural norms women were not open to talking to strangers. This limited the rate of participation of women during the sessions.

To handle this challenge, participants were given the freedom to communicate in their own language. One participant, who was familiar with both local (Kisukuma) and Kiswahili languages, interpreted to ensure that the participants understood the training content.

3. Effects of termite infestation to beehives.

Termite was observed as a significant challenge to all groups supported, causing damage to hive structures and hindering bee colonization. This limited bees from entering to the beehives and affected honey production.

To handle this challenge, Participants were recommended to make regular monitoring and follow-up visits are required to ensure proper hive management, cleanliness for beehives and kept free from termite and other pests that may obstruct bee movement and colonization.

11. What organisational changes have been observed within ESOs and start-ups in terms of leadership diversity, policies, and support systems following participation in DEI initiatives? Please provide specific examples where possible.

The implementation of DEI initiatives has resulted in substantial transformations of YAWE governing and operational systems and beneficiary groups, thus improving diversity in leadership, changing institutional policies, and building support. These transformations have made the organizations more inclusive and stronger, thereby opening the door for equitable opportunities in the enterprises that have climate resilience focus.

1. Leadership Diversity

YAWE and beneficiary groups shifted their management leadership systems to include more women and young people in the top positions. For example, 58% of the leaders of the groups are women; with 25% are leaders of the group of people with disabilities. Additionally, YAWE has integrated DEI principles in

all its programs. For example, currently, YAWE is implementing the Youth Voice for Climate Action funded by Oxfam International major focus is on youth, particularly women and people with disabilities. These changes go to other new funding opportunities and programs, and already, there is policy in place to support the inclusion of these marginalized groups at the organizational level.

Leadership switching has led to a better decision-making process in the organization, more innovations coming from the organization, and also the organization's ability to respond to the needs of the community has improved.

2. Policy Review and Institutionalization

YAWE conducted a review of internal policies to ensure that equity and inclusion are at the core of our organizational governance system. Human Resource policy, communication strategy, GESI policy, MEAL framework and Strategic plan have been reviewed to ensure that as an organization, we meet the fair hiring, keeping, and promoting employees, sharing messages with all our stakeholders and partners we work with. Additionally, improvement in meaningful participation and engagement of the at-risk communities. For example, we have reviewed and incorporated an Anti-harassment and complaints policies that work towards safe and supportive work environments.

3. Support Systems for Inclusive Participation

YAWE has decided to have separate groups of women, young women and people with disabilities to ensure that their participation rate in the program is increased, drawing the lessons learnt from the previous year implementation, where women and people with disabilities did not show up in large number due to gender stereotypes and social norms limiting their inclusion and participation in the project.

4. Integration of DEI Principles into programs and governance system

YAWE has strengthened the integration of Diversity, Equity, and Inclusion (DEI) principles within its organizational and programmatic structures through targeted capacity building and structured knowledge-sharing mechanisms. As part of this effort, 3 staff members received formal training on DEI concepts, tools, and practical application in program design and implementation.

Following the training, the knowledge acquired was systematically cascaded to Board members through internal learning sessions. This approach has helped establish a shared understanding of DEI principles

across both management and governance levels, reinforcing alignment between strategic oversight and operational practice.

Qualitative feedback from internal learning sessions indicates increased awareness and commitment to inclusive practices. Staff and board members reported improved understanding of how DEI principles can be applied in decision-making, program design, and organizational governance.

Selected internal reflections included:

"The DEI training has helped us recognize gaps in how we design and implement programs, especially regarding inclusion of marginalized groups." Vicent Laurent, Male, Aged 35, Executive Director, from YAWE.

"Board discussions are now more intentional about considering equity and representation in decision-making."

"We have started to question whether our programs are reaching all groups fairly and how we can improve inclusion." Moshi Jilalage, Male, Aged 35, Program Manager, from YAWE.

"Sharing the training content with the board has created a common language on inclusion and accountability." Cecilia Msangwa, Female, Aged 28, Gender and Safeguarding Officer from YAWE.

The program has strengthened institutional capacity for DEI mainstreaming by embedding inclusive principles into both staff practice and governance processes. This has contributed to more deliberate, reflective, and equity-oriented decision-making across the organization.

5. Annual Budget Allocation.

YAWE allocates at least 2% of its annual budget to support PWDs and other marginalized groups. This commitment ensures that organizational programs and interventions are inclusive, accessible and responsive to the needs of vulnerable groups.

This targeted allocation ensures that program design and implementation are responsive to the needs of vulnerable groups, including the removal of participation barriers and the provision of appropriate

accommodations where required. It also reinforces institutional accountability for mainstreaming inclusion across all programming areas. Feedback from the management team of YAWE pointed out that;

"The allocation has increased our accountability in ensuring that marginalized groups are not excluded from program benefits." Mary Mpangala, female, Aged 37, a board chairperson of YAWE

"We now intentionally assess how each activity will benefit persons with disabilities and other vulnerable groups." Moshi Jilalage, Male, Aged 35, Program Manager, YAWE.

6. Increased Gender Balance

YAWE has made significant progress in promoting gender balance within the organization level. Currently, comprises 50% Women and 50% Men, demonstrating the organization commitment to equal presentation inclusiveness and equal opportunities for all employees.

7. Appointment of a board member representing Persons with Disabilities

YAWE has strengthened inclusivity and representation by appointing one representative from a marginalized group specifically PWDs. This step demonstrates the organization's commitment to DEI by ensuring that the voices and perspectives of marginalized groups are represented in decision-making processes.

The inclusion of a PWD representative has improved the board's capacity to consider diverse perspectives when reviewing policies, approving programs, and making strategic decisions. It also enhances accountability in ensuring that organizational priorities remain aligned with the needs of vulnerable and underrepresented groups.

Lessons learnt

*In answering the below questions, please consider **qualitative** metrics.*

12. In your opinion, what aspects of the programme that are working well?

Aspects working well

1. Socio-cultural norms

During the project implementation, we recognized that language and household responsibilities often limit women's participation. The project adopted a culturally responsive approach by using local translators to facilitate communication between Kiswahili and Sukuma during training sessions and by scheduling activities at times that accommodated women's domestic responsibilities. This approach significantly improved understanding of training content, increased confidence among female participants to actively engage in discussions, and enhanced overall attendance and participation. During FGDs, women reported feeling more comfortable expressing their views in their local language and appreciated the flexibility that allowed them to complete morning chores before attending sessions.

One participant was noted,

“When the facilitator explained things in Sukuma, I understood much better and was able to ask questions without fear. Before, I would just sit quietly.” Witness Yohana, Female, Aged 36, from Mwawaza Village

Another participant added,

“The training schedule considered our responsibilities at home. After finishing my morning chores, I could attend the sessions without worrying, and this helped me participate fully.” Lilian Dogani, Female, Aged 37, from Mwawaza. Village.

- ### 2. Partnerships with associations of people with disabilities significantly enhance meaningful participation in program activities.
- This year, Yawe partnered with associations of people with disabilities in Shinyanga to promote their inclusion in the program. This approach proved effective, increasing participation among people with disabilities to over 20%. The lesson shows that working through trusted representative organizations helps address access barriers, build confidence, and ensure that inclusion efforts translate into active, meaningful engagement rather than token participation. Quotes from FGD

“When our association introduced the project to us, we felt confident to join because we knew our needs would be understood. For the first time, I was able to participate fully and share my ideas without fear.” Sitta Gilitu, Male, Aged 30, PwDs, from Nyuki & Mazingira Group.

- 3. Group-based training approaches** continue to prove more effective approach than individual person. Participants gained significantly from peer learning, shared experiences, and collective problem-solving. When one participant made a mistake, it became a valuable learning opportunity for others, fostering collaboration, confidence, and stronger skill development within the group.

One participant shared,

“In the group, we learned not only from the facilitator but also from each other. When someone shared a challenge, we discussed solutions together, and that helped us understand better.” Abiba Athuman, Female, Aged 23, from Bugimbagu Village.

- 4. Use of Local Language and Local Interpreters.** During the training and workshop sessions, use of the Kiswahili language was identified as a barrier to rural women, and this significantly limited the participation and interaction with the facilitators and the participants. Switching to the use of both Kiswahili and allowing participants to use their local languages during the sessions with an interpreter from their groups enabled them to increase their participation rate and interaction with the facilitators.

“When we were allowed to speak our local language, I felt comfortable asking question and sharing my experiences. Before that, I was afraid of making mistakes in Kiswahili.” Elizabeth Richard, Female, Aged 36, Mwawaza Village.

- 5. Grouping of participants in the same peer group category.** This year, we recruited four groups and encouraged the groups to be made up of people who share similar characteristics for example, we had 1 group consisting young women aged 19-24 years, 1 group consisting of only women, 1 group consisting of only people with disabilities, and 1 group consisting young men aged 19-30 years. This group categorization has encouraged open participation, confidence, peer learning, mutual support, reduced power imbalances or intimidation and making training and discussions more relevant to their shared needs.

“Being with people who have experiences similar to mine made it easier to speak openly. I did not feel judged and I learned a lot from others in my group.” Cecilia Shija, Female, Aged 21, Bugimbagu. Village.

6. Beehives hung on tall tress perform better than those installed on wooden stands. This year during project implementation, it was observed that beehives hung on tall trees performed better than those installed on wooden stands results tree-hung hives recorded higher bee colonization rates and were less vulnerable to termite infestation and other disturbances. This experience demonstrated that proper hive placement is a critical factor in successful beekeeping. As a result, future beekeeping interventions should prioritize selecting forest areas with sufficient tall trees suitable for hanging beehives.

13. What aspects of the programme do not work well? Please highlight anything you feel was less effective or continue to face challenges.

1. Attendance of participants.

Participants, especially women participants, frequently attended the training sessions late. Many women expressed that they were often occupied with morning household responsibilities, such as preparing meals for their families and fetching water, which made it difficult for them to arrive on time.

14. Based on your experience, what changes would you recommend for the next programme cycle? Are there any particular areas of work, themes or needs that you would propose exploring or like to be incorporated?

- For the next programme cycle, we would recommend introducing bee forage gardens activities to improve food sources for bees while supporting environmental conservation.
Also, we recommend for the next programme cycle the development of strategically located water harvesting dams around forest sites. These dams would provide a consistent and sustainable water supply for bee colonies, particularly during periods of drought, improving colony survival also strengthening ecological balance and contribute to improved productivity and resilience of smart-beekeeping activity

Financial Report

15. Have there been any significant changes to the budget compared to what was projected versus what is reported in the cost report? If so, please outline them below. When doing so, refer to your cost report and questions 2, 3 & 4 above. Please remember that you should be reporting on the budget from the beginning of the programme cycle to end of December 2025. Please use this budget template for the reporting

https://docs.google.com/spreadsheets/d/16_AlJm07uSjpkmiljmuWiCOw2S5zCfPz/edit?usp=drive_link&ouid=112000731107398880247&rtpof=true&sd=true

Note: major changes are defined as a 20% variance between budget lines, the introduction of a new activity, or adjustments to activities that resulted in new costs being incurred while others were dropped or delayed.

To submit the financial reports please use this excel sheet and send it alongside this written report. The excel is the same template that was submitted at the contracting stage (and annexed as Exhibit C to the grant agreement)

Receipts, invoices and timesheets will not be required at this time however you must be prepared to provide them should we request a full audit.

Publications, Links and Media

16. If available, please briefly describe any communications activities related to your work that have taken place to date, or if you have any planned for the future. Please include any additional pictures, marketing materials, social media posts and links that you would like to include to support this report.
17. Please evaluate Climate KIC as a partner. This is an anonymous survey. Please fill out [this form](#). Only 1 form per ESO.
18. We are tracking the DEI Progress of each ESO. Please fill out [this DEI Assessment Endline form](#) and the [OCAT progress](#) (fill out Worksheet 2, Column L, Progress II). Only 1 form per ESO.
19. Please include the final version of your DEMO DAY slide deck in your submission. Please save as powerpoint file with file name: Name of your ESO-Demo Day slide deck.
